McPherson County Public Works

Road & Bridge Program

2016

McPherson County's Road and Bridge improvement program for 2016 includes improvements to 81.0 miles of roadway and 23 bridge/culvert structures, weather permitting.

The program consists of the following construction and maintenance activities:

Some of the roadways may receive more than one type of maintenance procedures as indicated in the List of Locations for the different work. At the same time, other roads and bridges may replace some of these locations mentioned in this brochure as deemed necessary during the construction season. Some of the work may not follow right behind the preceding work due to the scheduling of county forces and the contractor.

Each of the project sites is a construction zone and will be signed accordingly. There may be some inconvenience and possible delays to the traveling public when the work is in progress.
