

FOR IMMEDIATE RELEASE:

From: Shalei Shea, RN BSN

McPherson County Health Department Director and McPherson County Health Officer

September 16, 2021

CORONAVIRUS DISEASE (COVID-19) IN MCPHERSON COUNTY

During the first two weeks of August, August 1 to August 14, 2021, 87 new cases were identified. Between September 1 and September 14, 2021, 208 new cases were identified. This is a continuing alarming trend increase. Hospitalization frequency has also increased in comparison to previous months. It is pertinent those who are eligible get vaccinated, individuals stay home when sick and individuals take necessary precautions when gathering. McPherson County Health Department (MCHD) recommends all individuals 2 years old and above mask in indoor settings when 6 foot distance cannot be maintained while community transmission is high.

MCHD has identified vaccine breakthrough cases. A vaccine breakthrough case is defined as the detection of COVID-19 via antigen or PCR testing from a person that is at least 14 days past completing all recommended doses of a U.S. Food and Drug Administration (FDA)-authorized COVID-19 vaccine. McPherson County vaccine breakthrough case data can be found on the McPherson County COVID-19 Dashboard.

As of this release, there are 25 confirmed variant cases out of 35 tested specimens. At this time, these identified variants do not require additional quarantine or isolation precautions outside of what is already done for non-variant cases. More information regarding COVID-19 variants can be found at <https://www.who.int/.../tracking-SARS-CoV-2-variants/>.

- Variant B.1.1.7 (Alpha): 6
- Variant B.1.617.2 (Delta): 14
- Variant AY.3 (Delta): 3
- Variant AY.4 (Delta): 2

Individuals who have completed the series of Moderna or Pfizer COVID-19 vaccine and meet the following the criteria are eligible for a third additional dose of COVID-19 vaccine:

- Active treatment for solid tumor or hematologic malignancies
- Receipt of solid-organ transplant and taking immunosuppressive therapy
- Receipt of CAR-T-cell or hematopoietic stem cell transplant (within 2 years of transplantation or taking immunosuppression therapy)
- Moderate or severe primary immunodeficiency (e.g., DiGeorge, Wiskott-Aldrich syndromes)
- Advanced or untreated HIV infection
- Active treatment with high-dose corticosteroids (i.e., greater than or equal to 20mg prednisone or equivalent per day), alkylating agents, antimetabolites, transplant-related immunosuppressive drugs, cancer chemotherapeutic agents classified as severely immunosuppressive, TNF blockers, and other biologic agents that are immunosuppressive or immunomodulatory

You may call MCHD at 620-241-1753, your local healthcare provider, or pharmacy for an appointment. You may also search for locations using vaccinefinder.org. McPherson County is vaccinating anyone 12 years old and above.

- As of September 15, 2021, according to the Kansas Immunization Registry, KSWebIZ, 19,071 doses of COVID-19 vaccine have been administered to McPherson County residents. The majority of doses administered have been Moderna (11,733), followed by Pfizer (6,559) and Johnson and Johnson/Janssen (779).
- As of September 16, 2021, according to the CDC COVID Data Tracker (<https://covid.cdc.gov/covid-data-tracker/#county-view>), 45.7% of McPherson County's population has been fully vaccinated. 53.4% of the population 12 years old and above are vaccinated, 56.3% of the population 18 years old and above are vaccinated, and 83% of the population 65 years old and above are vaccinated. More information can be found on their website.
